Goztow wrote on Tue, 03 March 2009 09:43 I've noticed it happened most when a player joins just at the end of a map. So let's say under ends, players joins while Volcano is loading. The player gets the players list of Under, including the team he would have been on while in reality, he's on Volcano in the other team.

I wonder if he wouldn't get the wrong player ID...

also most of the time the player he gets the id from, leaves when under ends, so there is a free slot but on the players screen there's not
