I got this error in 3ds max 2008 (This is the first time I've ever tried installing the Renegade importer and exporter into max, need to do it to make some light maps though). And yes, I did search for this, but the closest thing I could find was error code 126 and that wasn't even answered.

If you have any idea of what I did wrong while installing, or just want to provide me with how you installed your importer/exporter please do, just in case I overlooked something.
