Yeah, I have Telenet, but not the Turbo net where you pay 60 + euros (I think).

Well, a wire will be difficult because I still live with my parents and they aren't the easiest people to make something clear about pc's.

Anyway, if it's my wireless net, I guess there's nothing I can do... Thanks anyway.

EDIT: I read something about "Wireless Zero Configuration". Some say that if you stop it, it sometimes work to fix lag issues. I tried to stop it, but then I lose my connection.

The Darkz
