I cannot install renegade from my disc which was bought 3 years ago. It worked fine before but now it doesn't. When I install everything works fine but there is no word so i can't type in my serial code which is not good. Please help.

My specs are: 1.60 GHz cpu, 1 gb ram, nvidia Geforce Go 6150 (64mb shared video), Windows Vista Home Premium with no service pack in it.
