When i launch it, there is absolutely NO presets...

if i click NEW and hit OK

my desktop gets enlarged as if its 800x600 then returns to normal with the normal Level Edit box saying Loading preset library

In _editor log it says cannot find or load sunhalo.tga

then automaticly disapears and i get this message...

Your Renegade registry entries are incorrect; Either use the Renegade serial number changer (version 1.1, stick in General Discussion, look near the end of the topic) or reinstall Renegade.
