Easy answer - Choose the Motherboard/Chipset you want - Then just throw in whichever CPU you can afford.

Pound for Pound, there's not much in it between the two - I saw the benefits of the new Intel 875 Chipset, and went for the IC7-G motherboard - I wacked in a P4 2.53, clocked her upto 3Ghz and I'm a happy bunny.

So AMD or Intel? - It depends what your Motherboard of choice takes.

Oh - And here's my baby;
