Goztow wrote on Wed, 13 May 2009 08:34The method BlackIntel currently implemented would allow the users of your choice to dc. DC'ers are presented with a password, if you give out that password to a restricted number of players, then they could use dc. We never did this because we never had regulars not using WOL/xwis but it would be an option for servers that like to get a good protection and keep their dc regulars.
That's a pretty neat system indeed, would be nice if that system would be included into TT/SSGM
