Not if you have a Shitway, sorry. Basically the only thing that can help you is a new graphics card.

Before you look into replacing your graphics card, turn Renegade to lowest detail settings, no shadows, 640x480, etc, and see what your FPS is. If you are getting less than 20 with everything turned off, then you definitely need a new graphics card. Check with Gateway or look inside your computer to see if it has an AGP slot. (Brown, in-line with the white ones, and kinda short compared to the 4-5 longer white ones)
