Just so people don't really think it was real.. if u pay close attention the icon doesn't line up.. I guess I'm not very funny

Thing is, Given the fact the real cheat executable actually doesnt have an icon and would require additional files in the same folder as the executable (In this case, desktop), that would be false.

You also couldn't have copied game.exe and then changed the name, because the icon is different.

The thing that remains though is that you have a folder on your desktop named like that and with exactly that icon.

So.. what is it, according to you?
