When I'm in game I lose graphics from time to time. Like i see lines when i turn certain ways, its hard to explain. I'm sure someone here knows what i mean.

My Specs:

Windows XP Pro

Directx 9.0

1 gb ram

Radeon HD 2400 Pro (drivers up-to-date)

Scripts 344

Now i just reinstalled windows and the game. I have the core patches up to date. I didnt have this issue before I reinstalled everything. Before i was using scripts 2.9.2. Don't know if that would have anything to do with this or not.
