hey folks- now that i am using the fixed xwisp of lion and i set eth0 to IP i get an error about the strings:

XWISP Console mode active - BlackHand Studios Inc. 2007

OK!: This build of Renegade is out of sync with the strings database (strings.tdb). Strings will be incorrect and may cause the game to crash. Version Error

*** Auto starting game. Type 'quit' to abort ***

Initializing LAN Mode

mybe there was an error while pathing the server files or something? is there anyone who just can give me a running server ? just pack it and i can load it somehow? i can modify the setting-files to what i need and it will run?! cause i really dont have any idea what else i can do.

i have an root in an webcenter so with wget or shell link the transfere of the packed server wont need much time. and maybe i can help out the one who can give me a running server with something...
