Well no longer a boneing vehicle problem so much as a skinning vehicle problem

Well i have spent the last 4-1/2 hours trying to skin this pos.. First i unwrapped UVW's and i made a skin for them (first hour) then i put it on the car only to find its all screwed up around the seams...

So i ditched the skin and spent the last prevoiose hours trying to fix this problem, i look up UVW tutorials on google renhelp etc

Now is the time to ask for help i suppose..

How do i fix this:

grrrrr

Here is the skin i am useing:

(Ignore the black filled right bottem corner)
