thanks for tips guys, i know im dumb to get confused on the order of how to do the multiplication, but you say do the order, so i guess that means the first number i want anything done with i should put into brackets then lets say * 100? but does it matter which direction u right the code? like

```
<< (a + b + c) *100
```

or

```
<< 100 * (a + B + c)
```

and lets pretend the answer is 2000 which one will come out with the right one? is
