## Subject: Lag and people getting booted

Hi...I was wondering if anyone could help me.  I have cable modem and I have a DL speed of 1675 kbps and a upload speed of 253 kbps according to DSLreports.com ( I love that site)   I have done the tweak tests and set all the recommendations it suggests.

Here is my problem....I have been making dedicated servers for 8 people and then it seems someone lags out and then EVERYONE in the game is booted.  I reduced it down to 6 people and have Net Update Rate at 5 and still have the problems.  I have Windows XP, 2.0 MHZ P4 chip, 1G of DDR Ram.  Any help would greatly be appreciated.  Thanks
