Except it's not, it's an official renegade patch map... where do you think the rest of the flying maps came from? From Westwood. City_Flying and Walls_Flying were released in the first patch I think, but Glacier_Flying came a little later.

Glacier was originally a "fan map" in the sense that it was up for download soon after City_Flying and Walls_Flying were available. It was then included in an official patch.

Anyway, I think I like all of the maps equally, except I don't like Hourglass, Glacier, and sometimes Mesa as much.
