lol fail, i can only max 60(60fps all the time, even on mp with 50guys+)(so ren say) in fullscreen, but like 150+ window mode on vista with all the stuff on... if you want best preformance run it fullscreen (crappy computers, and not windowed)

The trick is to find the best way for you, and the easy way to make it look like win9* is to rightclick the desktop and change the style...

I would never try this even if someone said it was safe, cause if it crash, not much you can do about it...
