Well it happened again 2 times. Only from the last time i have a memory.dmp debug. The Game2.exe called this time is from SS

Bugcheck Analysis

KERNEL_MODE_EXCEPTION_NOT_HANDLED (8e)

This is a very common bugcheck. Usually the exception address pinpoints the driver/function that caused the problem. Always note this address as well as the link date of the driver/image that contains this address. Some common problems are exception code 0x80000003. This means a hard coded breakpoint or assertion was hit, but this system was booted /NODEBUG. This is not supposed to happen as developers should never have hardcoded breakpoints in retail code, but ...

If this happens, make sure a debugger gets connected, and the system is booted /DEBUG. This will let us see why this breakpoint is happening.

Arguments:

Arg1: c0000005, The exception code that was not handled Arg2: bd0cf749, The address that the exception occurred at

Arg3: b35c6aa4, Trap Frame

Arg4: 00000000

Debugging Details:

PEB is paged out (Peb.Ldr = 7ffd800c). Type ".hh dbgerr001" for details PEB is paged out (Peb.Ldr = 7ffd800c). Type ".hh dbgerr001" for details

EXCEPTION_CODE: (NTSTATUS) 0xc0000005 - The instruction at "0x%08lx" referenced memory at "0x%08lx". The memory could not be "%s".

I have a screenie of the BSOD below. From the second and first time BSOD's

error.png, downloaded 274 times

0x0000008E

Both have this

nv4_disp.dll -

(0xC0000005, 0xBD0CF749, 0xB2009890, 0x00000000)
