The First Decade fix:

Start "Run". In the blank box type "regedit" (without ""). Now the registry editor will pop up! When it has come up you go to "HKEY_LOCAL_MACHINE" Then open up "SOFTWARE" and scroll down to "Westwood" and then at "Renegade". Now if you look at the list to the right at the registry editor so should you see some registry values. Mark the one with the name "InstallPath" (double click at it)

Change it to exactly the path it is installed to (normally C:\Program Files\EA Games\Command & Conquer The First Decade\Command & Conquer Renegade(tm)\Renegade\Renegade.exe)

Why did I mark (tm) for? Well, cause it is always missing in the string

Hope this did help
