Server owners can specify specific skins to disallow or allow by hash. As for the otehr way. There will probably be a set of modes where Pure mode would lock down all skins (except for whitelisted ones), and normal mode which would only lock down cheat sensitive skins (for example scope) or SBH stealth effect. I supose we might also make a non-blockage mode where everything is allowed. But alas this is all theoretical since other work has currently priority and we haven't finished it yet.
