Was it an nvidia chipset? They tend to suck the big one. I've used a 780i, 790i and a 45 chipset. The 780i has died twice, 790i and 45 have been fine. Moving to X58 this week, much more stable than any nvidia chipset could dream of.

Asus had a lot of bad boards, like evga because of nvidia chipsets. Wasn't really their fault these boards were such junk. If you had that many problems with an intel chip, that's odd.
