Run the game from the Renegadex frontend. Find a server, choose a nick and click join game or whatever. When you will get to the menu, it might lagg a little, dont do anything, it will automaticly get you in the server. If you have a fast computer, you wont stay long in the menu, if you dont have a fast comp, you might have to stay. I run the mod on very high graphics and i wait about 7-10 seconds in the menu.
