First off - you said you upgraded to Win XP. Is Renegade still installed from the old version of Windows ? If so remove it via Add/Remove Programs (in the Control Panel). If Renegade isnt listed in add/remove programs simply delete the folders (and open regedit.exe and find all keys

make life very very bad)

I don't use XP and dont know much about it but some general troubleshooting issues would be :

1.Clear the c:\temp folder contents
2.Clear the c:\windows\temp folder contents
3.Reboot & try again

This gets rid of any temp files placed during installations (more importantly CORRUPT installation files.
