Gozy r0x.

Anyways, back to business. This program is safe. I have personally went through each source file and checked the source for malicious code. There is none. If you don't feel you trust this program, there's no hard feelings; just don't use it. However, if you like the features it has to provide, then that's great too. I definately have some suggestions for halo2pac to increase security and privacy in this application, so that is something I will try to work with him on when I get the chance.

Quote:BHS enforces XWIS no-bots policy. Funny thing is, people who have posted in this thread should have known that considering they have had me enforce this rule in the past.

I'm not involved with Renegade in -any shape or form-, so wasn't aware of such policies or how Xwis and BHS handle such things.
