Even if his tutorial is biased towards his own IRC network (Not that there's anything wrong with that, just saying ^^)

Oh, and FYI, it goes straight from Step 2 to Step 4, although I assume that's because at some point you took out the bit about the FDS Monitor thing.

Also you didn't cover anything RenGuard related in that tutorial, such as disabling it if you don't like it (or disabling it as much as possible in BR 1.52, which just leaves it running quietly in the background not interfering with anything)
