A router, plus Windows' built in firewall should be more than enough protection.

Even without a router, you should be OK with just Windows if you don't do dumb stuff online. If not, ZoneAlarm is a good free antivirus, but that's the only one I've used, and that was a while ago.

Ya lol, I have a link system router with a custom DD-wrt firmware and plus windows firewall, but I wanna be a lil more safe.

Windows Firewall = WIN.

(Yes, it's a little unexpected, but the built in firewall is better than most commercial firewalls.)

Some reason, I find that hard to believe.

Our server uses it and it does work. Of course, it's not hard to add exceptions, but when you can add exceptions you're on the server anyway.
