For Windows users, go to Start, and then Run. Type in regedit and click OK. The registry will open. Search for the game's title (ctrl - f). Hit F3 to continue the search if the title doesn't show up on the first page. If you look in the data column, you may see a long string of numbers and letters that looks like a serial number. Write it down and save it.

Google pwns, worked for me. You may have to use f3 several times, the name of the folder should be Serial.
