(SSnipe) -BLU3Y3Z- wrote on Mon, 30 November 2009 23:36Tell me how it goes, I heard MSI sucks.

Everything is working great so far. I've been stressing this board and the CPU and it just keeps coming back for more. The VRM heatsink does get a little warm, so it might be worth your time to take it off, clean off MSI's thermal grease, and then add your own if you're inclined.
