How To:

Install Renegade on Windows 7:

1) Insert the disk in the CD/DVD drive

2) Press Install during the setup

3) Follow the steps during the setup/installation

4) Use the config program (WWConfig.exe) in your Westwood/Renegade folder

5) Start Renegade, in the main menu pick Multiplayer Online, Westwood Online, Advanced Listing, enter a random name and a password (8 letter or numbers i think). Download the patch if needed.

6) Pick a server, and there you go

Tested TWICE on Win7 x64
