---

Tried again today and it failed, this time after 20 seconds.

below is a screenshot of the connection attempt. My IP (192.168.0.31) is Natted so no1 pwns my connection

I've attached the original pcap file capture, though you need Wireshark or similar software to interpret it.

Can anyone suggest what I should do? The communication seems to happen between my PC and the Renguard server.

Also I haven't changed anything since yesterday when it was working.
