Hello all,

I'm currently trying to compile a list of different antivirus and firewall software and steps on disabling them. I know that I can download, install, uninstall them on my own for this project but many minds are better than 1 and that brings me here for help.

So, what I'm needing are
The name of the antivirus/firewall and steps on disabling them. Whether it's right clicking on the icon and selecting disable or more advanced things like actually going into the menus to disable it.

There are tons of antivirus programs out there but I'd appreciate it if you could take the time to help me out here.

Here is a list of the most common software that I'm looking for.
AVG, McAfee, Norton, CA, Avast!, Kaspersky, Panda, TrendMicro and ZoneAlarm.

- added
spy blaster
spy bot search and destroy
ad-aware

Those are only a few but also the most popular. If anyone has any questions feel free to ask.
