Here are a few examples

INT Array
int myInt[127];
example loop to put player ID's in it
for(int i = 0; i < sizeof(myInt); i++)
{
   myChar[i] = playerID;
}

Char Array
char myChar[127][255]; //char uses 2 number sets for 1 array. Last set always defines the max number of characters in 1 sentence/spot
example loop to put player names in it
for(int i = 0; i < sizeof(myChar); i++)
{
   myChar[i] = playerName;
}

Note that arrays for floats, doubles, longs, bytes etc are the same as an int array

Hope this helped you a bit
