I had the same problem with that message.
Luckily there is another w3d importer to import those files.

Download the file i have here in my attachment
paste that file in gmax/gamepacks/westwood/renx/plugins

Start RenX after that
-Click on the tab 'costumize'-> costumize user interface.
-Scroll down untill you see 'Import a W3d File'
-Assign as hotkey for example CTRL+ALT+W
-close costumize user interface
-now press CTRL+ALT+W and you will see a popup of a different w3d importer

Now import the int_n file and it should work
