Okay, so, reinstalling my game is clearly not the answer.
Dob't have linux.
Serial changer, whatever that was, didn't do crap.
My serial is a LEGAL serial, I bought the damn game.

So, long story short, nothing here work. And I got tired of fucking with it, and decided to play some Yuri's Revenge. This time I got a *****FATAL***** warning of some sort.

Is there no one that can help?
I say again, I run Vista, legal copy, tried that Run as Administrator thing too.
