Does the brightness look fine in Windows ? If not adjust the settings there. My config is similar to yours and I also recently installed DX9 w/no issues.

I also use Win 2k (but SP3 instead of SP2) you can see my other info in my sig. Win2k SP3 replaces a lot of files so I'd suggest the following :

- A) Uninstall Renegade
- B) Reboot
- C) Get SP3
- D) Reboot (duh)
- E) Reinstall Rene
- F) b0ink n00bs

Hope this helps...I'll browse around (maybe) and see if I can find some info for joo.

Good luck,

The One
