I've been keeping a list of cheaters and possible cheaters that I run into, and placing them on my ren buddy list to keep track of (Which I have dubbed my "n00b tracker"). I can get IP's for some of them as they were banned by me from the Crimson79 server, but others were passed by word of mouth, or from other servers that I visited where I don't have access to that information.

Some names so far:
