Just like to say I have always used XFX GFX cards and I have never had a problem with them. I once forgot to plug the fan back in on my XFX 7900GS and the temp quickly hit 130c (yes C) (which I didnt know at the time) and I ran it like this for several hours.. even though I kept getting FPS drops every 2mins where the GFX turned off because it hit 130c and then back on again and still didnt have any problems, in fact im still using that same card now and its been a good 2-3years now.
