Dante wrote on Sun, 04 April 2010 11:57 One thing to be careful of.

Make sure to name your lvl file c&c\_whatever so when it is exported to .pkg and you rename to .mix the .mix and the contained files will match.

I do believe there is a version of level edit (maybe jonwil's) that will allow you to just export as .mix natively without the rename though.

Yea, jonwil's version allows .mix exporting.
