Here is a selection of weapons I have used / made for my Renegade.
Most of them are made by me but some of the models come from different games. (Which I will credit)

To install simply unzip the contents to your Renegade datafolder.

If you have any tips or comments feel free to post them.

First up:

Here is my try to recreate the beta rocketlauncher.

Second:

This is the Doom3 shotgun from IDsoftware converted for Renegade.
It replaces the shotgun.

Third:

This is the Quake3 Rocketlauncher for Renegade model made by ID software I just converted it.

Fourth:

This is a replacement for the laserrifle. Its from a game called eliteforce by Raven software.

Fifth:

This is my homemade Luger replacement for the pistol.
(Sounds are from RTCW)

Sixth:

This is the MP38/40 for the automatic rifle.
(Sounds are from MOH)

Seventh:

This my MP44 it replaces the flechetterifle.
It is fully rigged with reload animation.

(Sounds are from MOH)

Eight:

A bren light machinegun as replacement for the automatic rifle

The last one:

A M16 as ramjet replacement.

It may sound weird but someone requested it for his ramjet so here it is.
