@Jerad:

That message box means that when RB sent the command to get your nicks from xwis.. nothing came back fast enough... possibly your internet lagged for less than 5 seconds.

@Goztow:

stored in a hash? I've never come across this. Mine is stored in the registry plain as can be, same with a few others. I have TFD, and the only retrieve serial error I have seen so far is with different x64 os's. and I swear I fixed that-but it seems not.

For the 9 characters and only a-z and 0-9 RB should be making sure that foreign characters are not in there since the first beta.

as for the remove_buddy error... very odd. I'll look at this first.
Do you have any buddies in the buddies.ini file?

Update...The remove buddy error was because the buddy was an xwis buddy. I'll make a specific alert box until I add deleting xwis buddies.
