Uninstalled and re-installed both 32 & 64-bit client TS3, having tried both downloads from the links provided, (Microsoft Visual C++ 2008 Redistributable Package x86 for the 32_bit, and Microsoft Visual C++ 2008 Redistributable Package x64 for the 64-bit. The result was an epic fail.

I got this message when I clicked on the icons of the programs downloaded from both links provided:

The procedure entry point HeapSetInformation could not be located in the dynamic link library KERNEL32.dll.

Any one care to take this one?
