Inbound services and Outbound services? - Which applies to Renegade?

I'm in the middle of port-forwarding for Rene; and was wondering which section I have to add it to under the "Firewall Rules" section.

In the guide (as shown in the link below); it says - Click the Outbound Services or Inbound Services Add button. If you are unsure whether the program you are using will use these ports for inbound or outbound traffic, repeat these steps for both Inbound and Outbound.

  http://portforward.com/english/routers/port_forwarding/Netgear/DGN2000/Command_a nd_Conquer_Renegade.htm

So I was wondering which applied to the ports for Rene.

Any help appreciated.

Edit: When you add a service, it asks for your LAN Server IP Address. Is that listed as the set of digits after Default Gateway, or your IP adress once you use IPconfig in CMD.
