Subject: comps fucked
Posted by zeratul on Wed, 23 Jun 2010 05:08:43 GMT

ok i was working normal shit when my comp suddenly crashed and it had to do startup repair after a failed restart attempt then it failed and i had to do it again... later a message popped up that said Cannot be repaired automatically... it wont start up what the fuck is wrong with it

edit: ok its working now *i unplugged it and then restarted it and let it sit for a few minutes* and it took less time then before i gave up on the first try
