Yeah I saw someone with this. It was a GSA server and Crimson had just played Walls on it but she left when Volcano loaded up and this is when the cheater arrived. He kille tanks in 1 shot and also people.

As far as I know the objects.ddb is used in the cheats and is somehow loaded into the game at some stage. Obviously it wouldn't be possible to load it when you connect to the server or it would cause a version missmatch.
