Phase I know how to log into an account or to unclick auto login and such. I played renegade alot
4-5 years ago. I was a moderator in Black-Brigade and loved on the old Blackhand servers. But I
dont know much about Xwis. what it is or how it works. I always bypassed it or never had
problems back than. When i go to My info it auto forwards me to serverlists some reason i cancel
than im in my information.
Perona
preferred team
locale
everything but internet connectivity option are disabled. see my 3 pictures I uploaded it shows
connectivity brighter than the other 4 options.
It doesnt want to load the account/password pop-up. when I hit Manage account i get this "fail to
load page" error.

So I think maybe i need somethign to do with Xwis.
