FDSComm Public Beta v0.4

TCP Logging and Commanding system for the Renegade FDS.

Hey guys!

I've had this as an internal beta between me and my friends for a while now (bout 7 months) fully working.

It is a plugin for SSGM that allows you to connect to the Renegade FDS and Send TCP commands while also allowing you to receive TCP Logs from the FDS. I compiled a thorough guide and 2 socket bot like examples. Source is closed for now, sorry.

Edit: This will need Hooks.dll
