Hey guys, I'm messing around with my new hud using Deathlink's shaders.dll, but for some reason my bulletcount/clipcount and weapon names don't show up. How can I fix this?

I even removed the boxes to see if it might be a problem with the alpha channels, but still it didn't show up.

Also, is there a way to make round radar images, cause I couldn't get it to work.

Please help.

Hud.ini file and screenshot included.
