I need to get my renguard working so I can play the fucking game without getting forcereg'd by people who accuse me of cheating due to a couple of lucky shots that killed an sbh...

This is what's wrong...

I start renguard

renguard starts

in the textbox reads:

```
[time] Trying to connect to server #1... Failed
```

```
[time] Trying to connect to server #2... Failed
```

```
[time] Trying to connect to server #3... Failed
```

```
[time] Trying to connect to server #4... Failed
```

```
[time] Trying to connect to server #5... Failed
```

```
[time] Trying to connect to server #6... Failed
```

```
and so on...
```

I can leave it for 100 servers, it still wont connect... one time I left it for 50 servers and it didnt do shit...

What the hell do I do?
