Subject: Problems with scripts 3.4.4
Posted by QoQPCP on Tue, 28 Sep 2010 17:40:05 GMT

2 days ago i decided to reinstall renegade because i wanted to remove my skins. I reinstalled but when i try to run renegade it says "bhs.dll requires 2000/XP/2003". Without the scripts my ren runs great. Im running on Windows XP and these scripts worked before on this computer.
These are the steps i did to un and reinstall:

1) Uninstalled Renegade
2) Removed all files left in the westwood folder and deleted the westwood folder itself.
3) Reinstalled Renegade
4) Patched it to 1.037
5) Replaced the game.exe with the one from the NO CD crack 1.037
6) Installed scripts 3.4.4
7) When trying to run Renegade, pop up shows up, "bhs.dll requires 2000/XP/2003.
 Ren closes itself.

Without the scripts it runs perfectly.
Thanks in advance

Edit:
I fixed the problem with the help i got on Jelly forums.
For future reference:
- Updated my directX components
- Run Renegade in compability with Windows 2000 und check the No Visual themes button.
Thats what fixed it for me...
Thanks to STEREODOG
Topic can be locked i guess
