Use Virustotal if you are unsure if your virusscanner is telling the truth. <http://www.virustotal.com>

I scanned it and it said that 5 of the 43 virusscanner think it is a virus.  
If Norton, mcafee and Microsoft's scanner would determine it to be a virus then I would start getting worried.  
In this case Avg is 1 of the 4 others in which the 4 others are kinda mediocore scanners.
