The Azazel story:

About a year and a half ago, reloaded went on holiday, leaving Azazel with IRCop status. After a couple of days Azazel had uninstalled 3.4.4 and downgraded to 2.3.3 (or whatever the lower one is). Obviously he suddenly improved to the point where he was getting 80-90 kills a map against other top snipers whereas previously he'd been only slightly better than average. On top of that he took advantage of a script installed by kicsi on the server that allowed mods to have access to all the weapons. Combining this with the !spectate command basically allowed spec killing without the *cheat name removed*(there's your abuse Argh).

Anyway, me and a couple of others who were on the TMX mod team at the time set about collecting evidence to present to reloaded when he returned. Unfortunately we didn't collect anything as concrete as those other guys did with that vid (props to them) but I'd say we had a hell of a lot of circumstantial evidence, more than enough to cast doubt on Azazel. Just before Re came back, Azazel was banned at Exodus. It didn't surprise me to see that a protest thread went up on exodus forums. I contacted Prulez informing him of what we were up to, and that unbanning him would be unwise.

When Re returned he didn't really see it the same way, and actually ended up promoting Azazel to admin after me and some others quit the TMX mod team. Shortly after this I quit Ren. Despite Aza actually posting a video of himself trigbotting, http://www.youtube.com/watch?v=MycjdsF_cQ4&feature=related and being leader of S4m with P0wershot (also found to be cheating). Aza got away with it until this concrete evidence. Once I'd left I actually asked Aza whether he was cheating, seeing as how it was irrelevant if i knew or not; he still denied it.

If he got away with it for all that time, in the position he was in with the evidence against him, think about who else could be doing the same.

EDIT: wrong vid link.
